Instructions for using ergo.<sup>®</sup> single-component RTV silicones

**General**

ergo.<sup>®</sup> silicones are single-component adhesives and sealants based on polysiloxane connections. They are used as permanently elastic adhesives and as sealants in electrical engineering, the automotive industry, mechanical engineering, precision engineering and glass construction.

**Curing**

ergo.<sup>®</sup> RTV one-component silicone adhesives cure under the influence of humidity. Curing begins on the surface of the silicone and proceeds toward the inside at a rate of approximately 2 mm in the first 24 hours at room temperature and with about 50% relative humidity. Adhesive bonds of large surfaces and high-layer thicknesses cure more slowly because once the outer layers have cured, humidity cannot penetrate the product as quickly.

Higher relative humidity accelerates the curing process, whereas lower humidity slows the process down. As low-molecular weight cleavage products are formed as the silicone cures, the substrates should be pretested to determine whether this degrades the integrity of the components.

**Preparation of mating surfaces**

For optimum bond strength, mating surfaces must be free of oil, grease and other contaminants. ergo.<sup>®</sup> 9195 is suitable for cleaning glass, and ergo.<sup>®</sup> 9190 can be used to clean metals.

In any event, we recommend that the suitability and strength of the product is pretested for its intended use. In many cases, the as-delivered condition of the components meets requirements.

**Application**

The products are supplied ready for use in self-draining pressure cans. The containers can be used by hand directly. Please note that a skin starts for form on the surface of the silicone after about five minutes and, as a result, the two substrates may no longer be able to absorb moisture.

To obtain the best adhesion and sealing results, the product application and joining process must be completed within this timeframe.

The information contained herein is offered in good faith and is believed to be accurate. However, because conditions and methods of use of our products are beyond our control, this information should not be used in substitution for customer's tests to ensure that KISLING products are safe, effective, and fully satisfactory for the intended end use. KISLING sole warranty is that the product will meet the KISLING sales specifications in effect at the time of shipment. Your exclusive remedy for breach of such warranty is limited to refund of purchase price or replacement of any product shown to be other than as warranted. KISLING specifically disclaims any other express or implied warranty of fitness for a particular purpose or merchantability. Unless KISLING provides you with a specific, duly signed endorsement of fitness for use, KISLING disclaims liability for any incidental or consequential damages. Suggestions of uses should not be taken as inducements to infringe any particular patent.
